Complete construction pathway — bindingmoad_4ITP_1GD (seed → rxn_01 → M1 → rxn_15 → final ligand)

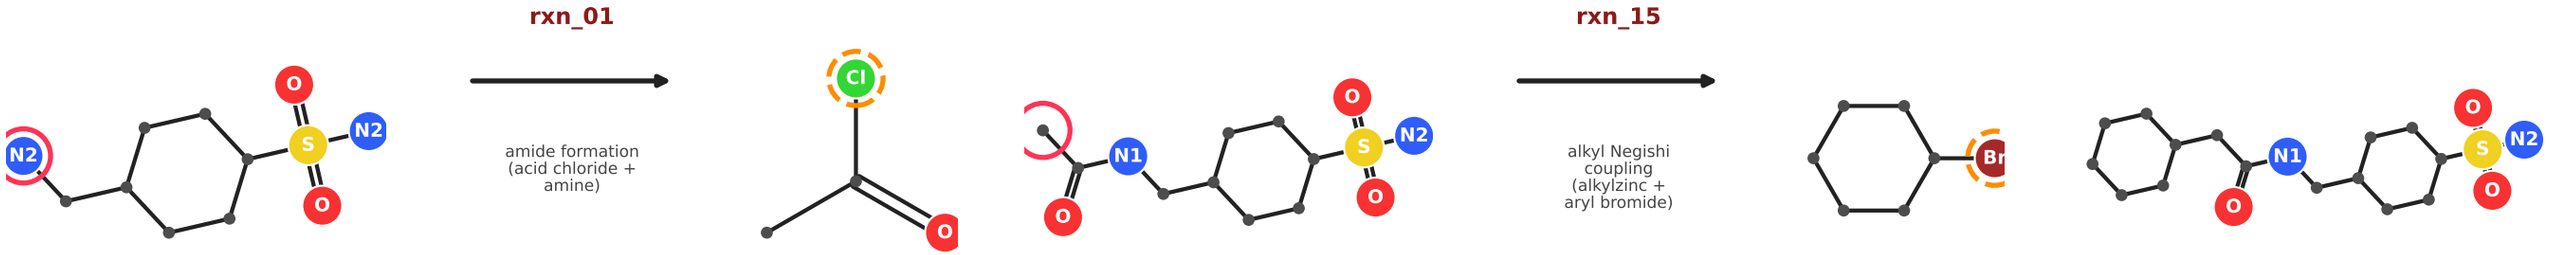
Initial seed (M0)
REC0153714 · NCc1ccc(S(N)(=O)=O)cc1

+ block 1
REC0176965 · CC(=O)Cl

Intermediate M1
CC(=O)NCc1ccc(S(N)(=O)=O)cc1

+ block 2
REC0127681 · Brc1ccccc1

Final ligand (observed)
NS(=O)(=O)c1ccc(CNC(=O)Cc2ccccc2)cc1



All depicted molecules are the actual trajectory structures; 2D layouts are scaffold-aligned (the seed remains visually fixed as the molecule grows). Ringed atoms = reaction centres (the atom that reacts next); dashed rings = leaving groups.
