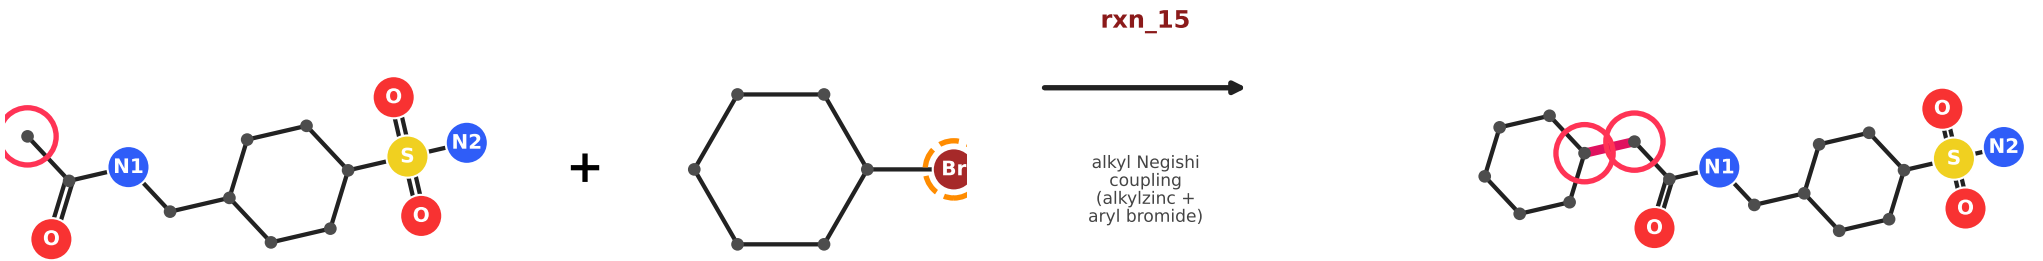
Step 2 — actual certified reaction equation · alkyl Negishi coupling (alkylzinc + aryl bromide) · family: cross_coupling_cc

Current intermediate (M1)
NS(=O)(=O)c1ccc(CNC(=O)[CH2][Zn][Cl])cc1

Incoming building block
REC0127681 · Brc1ccccc1

Resulting intermediate (M2)
NS(=O)(=O)c1ccc(CNC(=O)Cc2ccccc2)cc1



certified SMARTS: [CX4;H2,H3:1][Zn:4][Cl:5].[c:2][Br:3]>>[CX4:1][c:2]
new bond formed: single (junction); leaving (block side): bromide (deleted); leaving (molecule side): zinc + chloride (deleted)
catalyst/conditions: Pd/Ni-catalysed per the registry mechanism note — not modelled by the template (unspecified)
mechanism: Pd/Ni-catalysed sp3-sp2 coupling (Negishi variant for alkyl centres); primary alkylzinc only — no beta-hydride stereochemistry reaches the junction (documented)
